New brand animation format

What is the total revenue opportunity on a yearly basis for this customization?

KIRIN has already expressed interest in using this feature, with an annual potential of \$200K, and plans to utilize it for promotions in July, expecting an immediate \$50K.

What is the scalability of this offering and how much lift would be required for each ?

At present, we are assuming an additional \$50K on top of the existing Hashfetti amount. Given the limited number of participating clients, the incremental revenue is projected to be approximately \$500K annually. However, we are also considering selling the rights to implement Overlay Animation (tentative name) as a standalone option. If implemented, this would allow advertisers with budgets smaller than those required for reservation-based advertising (approximately \$210K) to utilize it, potentially generating further incremental revenue. Please see the details below:

Pattern with Advertising Conditions

Assuming 30 brand animation clients annually, with 10 of them implementing Overlay customization:

Incremental Revenue: $\$50K \times 20 \text{ Clients} = \$1M / \text{year}$

Standalone Overlay Usage

Incremental Revenue: $\$100K \times 10 \text{ Clients} = \$1M / \text{year}$

Total Incremental Revenue: \$1.5M *This is not a usage fee for advertising inventory, but rather a fee (potential) for using the feature.

Notes:

- The above estimates are for the Japanese market, and if it becomes available on Global, there is likely to be even more potential.
- For standalone use, the figures listed are only the usage amounts, and if advertising fees are included, an even greater impact can be expected.
